DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Malin et al. (Malin).

Malin discloses a system with a means for displaying an image (the monitor of the computer), repair-estimation time input (265), repair reserved data storage means (database 250), repair-reservable day/time data display means (the monitor of the computer), repair reservation determining means (resource queues 270), means for calculating a repair-reservable day/time (fig 1), the calculating means would be visible on the monitor, the system uses different criteria to calculate repair estimation time (265,270,275 and 280), the activities of a plurality of shops and bays is controlled and displayed (220), it would be inherent that if there was a problem the repair-reservation completion day/time could be changed, further, the actual time consumed on a task is recorded (page 5, paragraph 0050, line 12), while not discussed, it would be inherent that any time axis used would be universal throughout the system.
